

DISTRIBUTION

“Going to the Distribution Facility was an amazing opportunity to learn more about what they do to keep Pennichuck serving its customers all year round.”

Hi, my name is Cameron, I recently graduated from college last Spring. Following my graduation, I accepted a position at Pennichuck Water working as their Corporate Communications Specialist. When I first started, I had no idea about the water industry and its significant importance. My intent with creating this blog is to be able to share what I learn and experience about the water industry with others.

In this blog, I will be focusing on my first trip to the distribution facility.

When I first went to the distribution facility, it was for a young professional’s luncheon and tour of the facility. All of us arrived at the same time and were shown into the breakroom where we all gathered before the tour. The distribution team began the tour by first discussing daily operations and the amount of effort it takes to supply clean and safe water. We then moved onto the garage where all Pennichuck’s vehicles are housed, which saves valuable time each morning. Afterward, we moved to the part of the garage where repairs for these vehicles were done. Pennichuck has two mechanics on site for ongoing vehicle repairs and inspections. At our last stop on the tour, we went into a room that handles meter testing and repairs.

After the tour, we went back to the breakroom where pizza was waiting for us. While we were enjoying our pizza, we were given presentations about the young professionals committee that Pennichuck partners with including New England Water Works Association Young Professionals (NEWWA YP), and New Hampshire Water Works Association Young Professionals (NHWWA YP). We also learned about The National Association of Women in Construction (NAWIC) and how they encourage young girls to break into the construction industry. We then discussed internal committees within Pennichuck that we could join such as the Employee Engagement Committee (EEC).

Going to the Distribution Facility was an amazing opportunity to learn more about what they do to keep Pennichuck serving its customers all year round. It was also a great opportunity to be able to meet and connect with others and get to know them better.
