

EVANS COOPERATIVE

Recently, I had the privilege of attending the New Hampshire Water Works Treat and Meet, hosted by the New Hampshire Water Works Young Professionals Committee.

These events are held multiple times a year to provide water professionals with a closer look at the wide range of treatment facilities across New Hampshire.

The most recent event was hosted by Evans Cooperative, a newly built treatment facility serving the Evans Cooperative Community, which is a residential neighborhood made up of 20 homes in Epping, New Hampshire.

During the tour, we were shown the community's old well and pump system, as well as the newly constructed one, which is expected to be operational in July.

With this new system in place, residents of the Evans Cooperative will receive an updated infrastructure that will improve water quality, and treatment processes thanks to advanced technology.

Attending this event was incredibly eye-opening. It reminded me that there are still many rural communities throughout New Hampshire striving to enhance their water systems – not only for today but for generations to come.
